

## Healthcare Transformation with Informatics and Artificial Intelligence

Editors: John Mantas  
Parisis Gallos  
Emmanouil Zoulias  
Arie Hasman  
Mowafa S. Househ  
Martha Charalampidou  
Andriana Magdalinou

Artificial intelligence (AI) is once again in the news, with many major figures urging caution as developments in the technology accelerate. AI impacts all aspects of our lives, but perhaps the discipline of Biomedical Informatics is more affected than most, and is an area where the possible pitfalls of the technology might have particularly serious consequences.

This book presents the papers delivered at ICIMTH 2023, the 21st International Conference on Informatics, Management, and Technology in Healthcare, held in Athens, Greece, from 1-3 July 2023. The ICIMTH conferences form a series of scientific events which offers a platform for scientists working in the field of biomedical and health informatics from all continents to gather and exchange research findings and experience. The title of the 2023 conference was *Healthcare Transformation with Informatics and Artificial Intelligence*, reflecting the importance of AI to healthcare informatics. A total of 252 submissions were received by the Program Committee, of which 149 were accepted as full papers, 13 as short communications, and 14 as poster papers after review. The papers cover a wide range of technologies, and topics include imaging, sensors, biomedical equipment, and management and organizational aspects, as well as legal and social issues.

The book provides a timely overview of informatics and technology in healthcare during this time of extremely fast developments, and will be of interest to all those working in the field.

# HEALTHCARE TRANSFORMATION WITH INFORMATICS AND ARTIFICIAL INTELLIGENCE

# Studies in Health Technology and Informatics

Internationally, health informatics is driven by developments in biomedical technologies and medical informatics research that are advancing in parallel and form one integrated world of information and communication media and result in massive amounts of health data. These components include genomics and precision medicine, machine learning, translational informatics, intelligent systems for clinicians and patients, mobile health applications, data-driven telecommunication and rehabilitative technology, sensors, intelligent home technology, EHR and patient-controlled data, and Internet of Things.

The series Studies in Health Technology and Informatics (HTI) was started in 1990 in collaboration with EU programmes that preceded the Horizon 2020 to promote biomedical and health informatics research. It has developed into a highly visible global platform for the dissemination of original research in this field, containing more than 250 volumes of high-quality works from all over the world.

The international Editorial Board selects publications with relevance and quality for the field. All contributions to the volumes in the series are peer reviewed.

Volumes in the HTI series are submitted for indexing by MEDLINE/PubMed; Web of Science: Conference Proceedings Citation Index – Science (CPCI-S) and Book Citation Index – Science (BKCI-S); Google Scholar; Scopus; EMCare.

## Series Editors:

B. Blobel, E. Borycki, M. Braunstein, C. Bühler, J.P. Christensen, R. Cooper, R. Cornet, J. Dewen, O. Le Dour, P.C. Dykes, A. Famili, K.W. Fung, M. González-Sancho, E.J.S. Hovenga, J.W. Jutai, Z. Kolitsi, C.U. Lehmann, J. Mantas, V. Maojo, A. Moen, J.F.M. Molenbroek, G. de Moor, M.A. Musen, P.F. Niederer, C. Nøhr, A. Pedotti, N. Peek, O. Rienhoff, G. Riva, W. Rouse, K. Saranto, M.J. Scherer, S. Schürer, E.R. Siegel, C. Safran, N. Sarkar, T. Solomonides, E. Tam, J. Tenenbaum, B. Wiederhold, P. Wilson and L.H.W. van der Woude

# Preface

This volume contains the papers accepted for the ICIMTH (International Conference on Informatics, Management, and Technology in Healthcare) for the year 2023. The Scientific Programme Committee presents to the academic and professional community of biomedical and health informatics, the scientific outcomes of the ICIMTH 2023 Conference, held from 1–3 July 2023 in Athens, Greece.

The ICIMTH 2023 Conference is the 21st annual conference in this series of scientific events, which gathers scientists working in the field of biomedical and health informatics from all continents. As last year, because the situation as regards the COVID-19 pandemic has improved and restrictions were lifted, the conference was held as a live event. To encourage all presenters to attend the conference, virtual sessions by means of teleconferencing were not offered.

The field of biomedical and health informatics is studied at this conference from a very broad perspective, with the participants presenting research and application outcomes of informatics from cell to populations, including several technologies such as imaging, sensors, biomedical equipment and management and organisational aspects, including legal and social issues. Essentially, data science, informatics, and technology inspire health professionals and informaticians to improve healthcare for the benefit of patients. As was expected, a significant number of papers were still related to the COVID-19 pandemic, but this year we saw an increased influx of submissions in AI studies and applications in healthcare. We wanted this to be reflected in the theme of the conference and the title of the proceedings.

It should be noted that the proceedings are published as an open access eBook with e-access for ease of use and browsing without the loss of any of the advantages of indexing and citation in the biggest scientific literature databases, such as PubMed/Medline and Scopus, that the series of Studies in Health Technology and Informatics (HTI) of IOS Press provides.

At the end of the deadline we had more than 252 submissions, from which, after review, we accepted 149 as full papers, 13 as short communications, and 14 as poster papers.

The organisers would like to thank Dr. Spyros Zogas and Prof. John Mantas for the design of the cover illustration and of the entire conference series. This year the cover illustration signifies the reflection of AI applications in healthcare, as Hygeia faces her mirror automaton image, indicating the possible dangers to healthcare which exist during this extremely fast digital-transformation era of the healthcare system.

The Editors would like to thank the Members of the Scientific Programme Committee, the Organising Committee, and all Reviewers, who performed a very professional, thorough and objective refereeing of the scientific work to achieve a high-quality publishing achievement for a successful scientific event.

Athens, 26.05.2023

The Editors,

John Mantas, Parisi Gallos, Emmanouil Zoulas, Arie Hasman, Mowafa S. Househ, Martha Charalampidou and Andriana Magdalinou.

Preface	v
<i>John Mantas, Parisis Gallos, Emmanouil Zoulas, Arie Hasman, Mowafa S. Househ, Martha Charalampidou and Andriana Magdalinou</i>	
About the Conference	vii
A Hybrid AI-Based Method for ICD Classification of Medical Documents	1
<i>Daniel Bruness, Matthias Bay, Christian Schulze, Michael Guckert and Mirjam Minor</i>	
The Representation of Trust in Artificial Intelligence Healthcare Research	5
<i>Jan-Oliver Kutza, Niels Hannemann, Ursula Hübner and Birgit Babitsch</i>	
Leveraging Multi-Word Concepts to Predict Acute Kidney Injury in Intensive Care	10
<i>Lorenzo Brancato, Iacer Calixto, Ameen Abu-Hanna and Iacopo Vagliano</i>	
Increasing Trust in AI Using Explainable Artificial Intelligence for Histopathology – An Overview	14
<i>Cătălin-Mihai Pesecan and Lăcrămioara Stoicu-Tivadar</i>	
Health Data Democratization in Austria: Patients' Perspective	18
<i>Rada Hussein, Andreas Stainer-Hochgatterer, Josef Niebauer, Thomas Palfinger and Raphaela Kaisler</i>	
Patient-Generated Health Data Interoperability Through Master Patient Index: The DH-Convener Approach	20
<i>Prabath Jayathissa, Mahdi Sareban, Josef Niebauer and Rada Hussein</i>	
Data Quality and Data Quantity: Complements or Contradictions?	24
<i>Jürgen Stausberg and Sonja Harkener</i>	
Using Digital Tools to Train Health Emergencies Personnel in Fragile Contexts	28
<i>Melissa Attias, Heini Utunen, Ryan Crowder, Andrew Black, Elham Arabi, Katrina Litam and Anna Tokar</i>	
A Study on the Reliability of Visual XAI Methods for X-Ray Images	32
<i>Jan Stodt, Manav Madan, Christoph Reich, Luka Filipovic and Tomi Ilijas</i>	
Prediction of Waiting Times in A&E	36
<i>Luis F. Arias-Gómez, Thomas Lovegrove and Holger Kunz</i>	
Deep Learning Framework for Categorical Emotional States Assessment Using Electrodermal Activity Signals	40
<i>Praveen Kumar Govarthan, Sriram Kumar P, Nagarajan Ganapathy and Jac Fredo Agastinose Ronickom</i>	

Social Media Analysis Tools for Public Health: A Cross-Sectional Survey <i>Becky K. White, Elisabeth Wilhelm, Atsuyoshi Ishizumi, Tim Nguyen, Sylvie Briand, Sandra Machiri and Tina D. Purnat</i>	44
Infodemic Insights on Trust in a Health Emergency: A Narrative Deep-Dive <i>Becky K. White, Lucy Lavery, Atsuyoshi Ishizumi, Amy Wright, Tom Foley, Tim Nguyen, Sylvie Briand, Sandra Machiri, Noha Hassan, Agnese Pastorino and Tina D. Purnat</i>	46
Prototype Expert System for Gout Diagnosis on an Outpatient Basis <i>Ivan Osmolovsky, Tatyana Zarubina, Nadezhda Shostak, Alesya Klimenko and Artem Kondrashov</i>	48
Automated Emotion Recognition System Using Blood Volume Pulse and XGBoost Learning <i>Lokesh Naidu Lebaka, Sriram Kumar P, Praveen Kumar Govarthan, Priya Rani, Nagarajan Ganapathy and Jac Fredo Agastinose Ronickom</i>	52
Facilitating Interprofessional Collaboration on Electronic Medicines Management <i>Line Lundvoll Warth and Kari Dyb</i>	56
Diagnostic Classification of ASD Using Fractal Functional Connectivity of fMRI and Logistic Regression <i>Chetan Rakshe, Suja Kunneth, Soumya Sundaram and Jac Fredo Agastinose Ronickom</i>	60
Diagnostic Classification of ASD Improves with Structural Connectivity of DTI and Logistic Regression <i>Ravi Ratnaik, Chetan Rakshe, Manoj Kumar and Jac Fredo Agastinose Ronickom</i>	64
Multi-Class Seizure Type Classification Using Features Extracted from the EEG <i>Abirami Selvaraj, Swarubini PJ, John Thomas, Yuvaraj Rajamanickam, Ramshekhar N. Menon and Jac Fredo Agastinose Ronickom</i>	68
“DOMINO – Stop Domestic Violence”. An Educational Mobile Application <i>Evanthia Sakellari, Tiina Murto, Marjatta Häsänen, Timo Turunen, Hitesh Modhwadia, Maria Luisa Sotto-Mayor De Carvalho Pinto, Maria Anabela Ferreira Dos Santos and Areti Lagiou</i>	72
Preconditions for Implementing a Nursing App to Improve Digital Maturity <i>Gro-Hilde Severinsen, Line Silsand, Kristian Malm-Nicolaisen and Rune Pedersen</i>	76
Identifying the Optimal Location of Facial EMG for Emotion Detection Using Logistic Regression <i>Vinay Kumar Barigala, Sriram Kumar P, Praveen Kumar Govarthan, Swarubini PJ, Mythili Asaithambi, Nagarajan Ganapathy, Karthik Pa, Deepesh Kumar and Jac Fredo Agastinose Ronickom</i>	81
A Machine Learning Study to Predict Anxiety on Campuses in Lebanon <i>Madhuri Mahalingam, Manar Jammal, Reem Hoteit, Dinah Ayna, Maya Romani, Sahar Hijazi, Imad Bou-Hamad and Christo El Morr</i>	85

Leadership and Intention to Leave Among Public Health Sector Physicians in Cyprus: A National Cross-Sectional Study	89
<i>Ioanna Gregoriou, Eleftheria Ch. Economidou, Demetris Avraam, Elpidoforos S. Soteriades, Evridiki Papastavrou, Andreas Charalambous, Antonis Stylianides and Anastasios Merkouris</i>	
Brain Tumor Classification and Segmentation Using Dual-Outputs for U-Net Architecture: O2U-Net	93
<i>Seyed Aman Zargari, Zahra Sadat Kia, Ali Mohammad Nickfarjam, Daniel Hieber and Felix Holl</i>	
Understanding Health Records in West Slavic Languages: Available Resources, Case Study in Oncology	97
<i>Kristof Anetta</i>	
Training Healthcare Professionals to Mitigate the Climate Challenge – Development of a Lean Six Sigma E-Learning	102
<i>Marieke Sijm-Eeken, Monique Jaspers and Linda Peute</i>	
Experience from the Development of HL7 FHIR IG for Gatekeeper Project	106
<i>Roberta Gazzarata, Catherine Chronaki, Alba Gallego, Eugenio Gaeta, Giuseppe Fico, Paolo Zampognaro, Franco Mercalli, Francesco Giuliani, Carlo Allocca and Giorgio Cangioli</i>	
FHIR DataProvider for ReactAdmin: Leveraging User Interface Creation for Medical Web Applications	110
<i>Raphael Scheible, David Alkier, Justus Wendroth, Julian Mayer and Martin Boeker</i>	
Predicting Mortality in COVID-19 Patients Using 6 Machine Learning Algorithms	115
<i>Nikolaos Kourmpanis, Joseph Liaskos, Emmanouil Zoulias and John Mantas</i>	
An Overview About Connected Medical Devices and Their Risks	119
<i>Marlon Luca Machal</i>	
Rapid Review on Publicly Available Datasets for Health Misinformation Detection	123
<i>Zhenni Ni, Cédric Bousquet, Pascal Vaillant and Marie-Christine Jaulent</i>	
A Regressive Model to Study the Hospitalization for Laparoscopic Appendectomy: A Multicenter Study	127
<i>Marta Rosaria Marino, Vincenzo Bottino, Nadia De Falco, Nicoletta Basile, Mario Alessandro Russo and Maria Triassi</i>	
Effect of Clinical and Demographic Variables on the Hospital Stay of Patients Undergoing Total Knee Arthroplasty	131
<i>Marta Rosaria Marino, Vincenzo Bottino, Giacomo Negri, Maria Anna Stingone, Mario Alessandro Russo and Maria Triassi</i>	

The Classification Algorithms Applied to the Inpatient Stay for Lower Limb Surgery	135
<i>Marta Rosaria Marino, Vincenzo Bottino, Giacomo Negri, Maria Anna Stingone, Mario Alessandro Russo and Maria Triassi</i>	
Context-Sensitive Common Data Models for Genetic Rare Diseases – A Concept	139
<i>Najia Ahmadi, Michele Zoch, Brita Sedlmayr, Katharina Schuler, Waldemar Hahn, Martin Sedlmayr and Markus Wolfien</i>	
COVID-19 Mobile Apps Trends Derived from Long-Term Google Play Analysis	141
<i>Evgenii Pustozarov, Ute Von Jan and Urs-Vito Albrecht</i>	
Conciliation and Approval of Quality Principles for the Self-Declaration of the Quality of Health Apps	143
<i>Urs-Vito Albrecht, Evgenii Pustozarov and Ute Von Jan</i>	
Decreasing Admissions but Increasing Readmissions for Mental Health in-Patient Treatment in Scotland, UK	145
<i>Elizabeth A. Cooke, Agnieszka Lemanska and Spencer A. Thomas</i>	
Do Health Apps Stigmatize People with Obesity?	149
<i>Annabelle Mielitz, Evgenii Pustozarov, Ute Von Jan and Urs-Vito Albrecht</i>	
Health Digital Twins with Clinical Decision Support	151
<i>Moritz Grob, Philipp Seisl, Andrea Rappelsberger and Klaus-Peter Adlassnig</i>	
Microbiological and Virological Knowledge-Based Alert Service	153
<i>Jakob Kainz, Jakub Gawrylkowicz, Robert Strassl, Birgit Willinger, Florian Thalhammer, Andrea Rappelsberger and Klaus-Peter Adlassnig</i>	
Analyzing Twitter-Based Social Networks of Support Communities for Hispanic and African American Family Caregivers of Persons with Dementia	155
<i>Peter Broadwell, Niya Huang, Soyoung Moon, Dante Tipiani, Maria De Planell-Saguer, Amanda Bristol, Jianfang Liu, Nicole Davis and Sunmoo Yoon</i>	
Evaluation of Completeness, Comparability, Validity, and Timeliness in Cancer Registries: A Scoping Review	160
<i>Leila Shokrizadeharani, Zahra Batooli, Saeedeh Heydarian, Reihane Sharif, Shady Ghaderkhany, Maryam Tamehbidgoli, Fatemezhahra Ataiejahanbegloo, Daniel Hieber and Peter Kuhn</i>	
Desiderata for the Data Governance and FAIR Principles Adoption in Health Data Hubs	164
<i>Celia Alvarez-Romero, Silvia Rodríguez-Mejias and Carlos Luis Parra-Calderón</i>	
Predicting Prediabetes Using Simple a Multi-Layer Perceptron Neural Network Model	168
<i>Oana Virgolici and Horia Virgolici</i>	

Exercise Exertion Levels Prediction Based on Real-Time Wearable Physiological Signal Monitoring	172
<i>Aref Smiley, Te-Yi Tsai, Elena Zakashansky, Aileen Gabriel, Taulant Xhakli, Wanting Cui, Xingyue Huo, Ihor Havrylchuk, Hu Cui and Joseph Finkelstein</i>	
Factors Influencing the Evolution of Topics in Biomedical Informatics	176
<i>George Mihalas and Casimir Kulikowski</i>	
An Ontology Design Pattern for Modeling Experimental Paradigms	180
<i>Jacques Hilbey, Xavier Aimé and Jean Charlet</i>	
Attitudes Toward Plagiarism Among PhD Medical Students in Serbia	184
<i>Nina Rajovic, Andrija Pavlovic, Daniel Olatunde, Vedrana Pavlovic, Dejana Stanisavljevic and Natasa Milic</i>	
Digital Tools in UMLS Metathesaurus Knowledge Processing	186
<i>Pavel A. Astanin, Svetlana E. Rauzina and Tatyana V. Zarubina</i>	
A Conceptual Framework to Predict Disease Progressions in Patients with Chronic Kidney Disease, Using Machine Learning and Process Mining	190
<i>Nichalini Kandasamy, Thierry Chaussalet and Artie Basukoski</i>	
Towards FAIR Data Standardization Using FHIR Genomics Resources Integration in Obstetrics-Gynecology Department Systems	194
<i>Adina Nițulescu, Mihaela Crișan-Vida and Lăcrămioara Stoicu-Tivadar</i>	
Psychometric Properties of the Serbian Version of the Attitudes Towards Research Questionnaire	198
<i>Vedrana Pavlovic, Andrija Pavlovic, Thomas Klifopoulos, Nina Rajovic, Natasa Milic and Dejana Stanisavljevic</i>	
Provision of Decision Support Through Continuous Prediction of Recurring Clinical Actions	200
<i>Michal Weisman Raymond and Yuval Shaha</i>	
Patient-Centric Interoperability and Cybersecurity for Cross-Border Healthcare	204
<i>Fernando Latorre, Claudia E. Hawks, Bruno Colmenares, Deepika Verma, Marisa Gil and Nuria Sala</i>	
Why There Is a Need to Promote Media Literacy in the Use of Medicines and Health Products in Thai Older Adults?	208
<i>Tharinee Srisaknok, Chanuttha Ployleumsaeng and Ranee Wongkongdech</i>	
Interoperable Universal Resource Identifier for Selective Disclosure of Data	212
<i>Fernando Latorre, Claudia E. Hawks, Bruno Colmenares, Deepika Verma, Marisa Gil and Nuria Sala</i>	
The Biomedical and Health Informatics Recommendation Domains in Relation to the Nurse Competence Scale Categories	216

**Abstract.** Tuberculosis (TB) is one of the infectious diseases that currently causes the most deaths, with 6.4 million new cases recorded in 2021. Although it is a curable disease, drug-resistant strains emerge due to a lack of hygiene and low-quality or inappropriate medications, among other factors. With this in mind, the World Health Organization initiated the End TB Strategy campaign to improve the health system in the fight against tuberculosis. For this, reliable and high-quality health data is necessary to create effective public policies. However, despite technological advancements such as emerging concepts like Big Data and the Internet of Things, generating health information faces several obstacles. Therefore, the present work aims to describe a pipeline for TB research in Brazil to contribute to obtaining high-quality data.

**Keywords.** Tuberculosis, Data Science, Research data

## 1. Introduction

Tuberculosis (TB) is the second highest cause of death caused by a single infectious agent, surpassing HIV/AIDS. Despite being a curable and preventable disease, in 2021, 6.4 million new cases were recorded, resulting in 1.4 million deaths among HIV-negative individuals and 187,000 deaths among HIV-positive individuals [1]. The emergence of drug-resistant strains can be attributed to low-quality medication, poor hygiene, use of inappropriate medication, and delayed treatment approaches [2].

Drug-resistant TB, which is expensive and requires a long treatment period, needs new, affordable, and effective diagnostic tools that guarantee quality and proven efficacy to be rapidly implemented [3]. In addition, health services should incorporate new information systems to aid decision-making. The World Health Organization launched the Stop TB Strategy in 2006, followed by a new strategy in 2015 with more ambitious goals and a greater focus on research and innovation. Although both

---

<sup>1</sup> Corresponding Author: Mariana Mozini, E-mail: [mtmozini@usp.br](mailto:mtmozini@usp.br).

approaches have significantly reduced TB cases in high-burden countries, multidrug-resistant tuberculosis remains a global problem [4].

Data reliability is critical for improving health service quality and creating effective public policies. However, generating health information is faced with barriers such as problems with patient data documentation, data interpretation difficulties, and organizational issues [5]. In TB research, a large amount of complex data is produced from dispersed sources with low integration and varying accuracy levels. It impedes knowledge extraction and data analysis, making it challenging to provide decision support in operational and administrative processes and scientific research [6].

Currently, data coordination between TB stakeholders parties can be messy, prone to delays, subject to manipulation, and obscure. Thus, this work aims to describe a computational pipeline and the infrastructure needed for analyzing TB research data, assisting in establishing a high-quality data source in Brazil.

## 2. Methods

### 2.1. Brazilian Tuberculosis Research Network Ecosystem

The most used diagnostic methods for TB consider bacteriological, radiological, histopathological, and immunological approaches. The bacteriological tests consist of bacilloscopy and culture. Clinical materials such as sputum, bronchial and bronchoalveolar lavage, and other samples that can be taken from the respiratory tract are used for TB research [2].

The clinical laboratory has a fundamental role in the health system, given that most medical decisions are made using the information provided by laboratory processes. Quality assurance in a clinical analysis laboratory is built on all process stages, from the material collection (pre-analytical) to the result (post-analytical) delivery. Clinical samples sent to the laboratory for TB diagnosis must comply with a series of general conditions on which the quality and efficiency of the test results depend. It is essential to control the data quality from local centers belonging to the Brazilian TB research network, which covers 65 institutions and researchers [3].

### 2.2. Data Gathering, Infrastructure, Curation, and Analysis Pipeline

The TB Network conducts studies that require the collection and management of data in scientific, clinical, and managerial/epidemiological domains. The Research Electronic Data Capture (REDCap) platform is used for this purpose, which is a web-based application that allows the creation of case report forms, surveys, and research databases. REDCap is an open-source application that provides several tools for exporting data in multiple formats, including the CSV standard that facilitates compatibility with other third-party tools.

The collected data are categorized and segmented inside the network through the projects, and participants have restricted access based on the network policies. Data are automatically anonymized to ensure ethical, legal, and confidential issues, and their confidence rate level can be chosen. Before analysis, the data undergoes pre-processing to identify and treat missing and abnormal values and duplicate and redundant data. Validations are also carried out to ensure the types of variables and transformations, such as normalization and discretization.

The exploratory analysis is the next step in the analysis pipeline, where the data's distribution and amount are better understood. Descriptive statistics such as the mean, median, and standard deviation are calculated. Graphics such as bar and scatter charts and visual elements such as presentations and images are used to understand the results better. Regression and clustering calculations can also be used to find patterns and relationships in the data that are not easily identifiable.

### *2.3. Auxiliary Tools*

The collaboration scripts for developing machine learning and artificial intelligence algorithms are developed in Google Colab, a Jupyter Notebook-based platform. It provides an accessible and readily available environment for developing Python programs. Python is popular due to its high-level nature and simplicity, which enables portability across different platforms, and it has a vast developer community and numerous libraries. Specific Python libraries used in programming tasks include Numpy for mathematical functions such as linear algebra, Pandas for data analytics functions, and Scikit-learn for machine learning algorithms. Streamlit, a Python-based data visualization platform that allows data transformation into shareable pages without prior knowledge of other programming languages, was adopted for data visualization. Streamlit can be easily integrated with Python applications, requiring minimal adaptation to receive Python outputs, and is an efficient way to display data without using large tables.

### *2.4. TBWeb Application for TB Analysis*

A research network developed a web application to validate statistical analyses related to project data. The portal can connect to any database and offers real-time statistical analysis of clinical data through data visualization techniques. Researchers can monitor all updates in the data in real time.

## **3. Expected Outcomes**

The expected primary outcomes of this work are tools and a curated knowledge basis for frameworks that can promote clinical data quality within the Brazilian tuberculosis stakeholders through a national research network. Over the medium time, we expect to also encourage new models of data sharing (e.g., safe data havens, data lakes, data hubs) and innovative privacy-preserving and processes analytical methods. Also, it is expected, in the long term, to obtain positive health outcomes, such as developments in public health indicators, a better understanding of health services processes, improved research outcomes, and new approaches to ethical and legal issues.

Although the final goal is to implement this pipeline to the national network in Brazil, in phase 1, it will be first deployed and validated in 7 research centers, leading to different data types. Data from several government sources will be gathered to build a test database for the computational tool and validate data sharing among peers. Our success indicators will be based on the following parameters: adoption of the tool by the TB Network entities; the volume of data available and used; and perception of

usefulness for academic, clinical, and managerial audiences. After defining these parameters, a validation process for an official implementation as a national tool for TB will be carried out with the TB experts independently committee.

Based on a well-established process and robust evidence, we hope we can compare our results with the source documents of each center. It will allow checking the validity of a sample of the data entered on the form and define intervention, such as visiting the local centers to improve the data culture and promote continuous education. We expect also to be enabled to compare our solution with consolidated approaches like the Observational Health Data Sciences and Informatics (OHDSI) tools and the FAIR Principles.

#### 4. Conclusions

It is expected to successfully build a high-quality data source to provide a basis for developing new decision-support tools. We hope to advance scientific research and establish new diagnosis algorithms and optimized operational models toward better patient care and managerial decisions. In the long term, it is expected to achieve positive health outcomes such as improved public health indicators, a better understanding of health service processes, and new approaches to ethical and legal issues.

#### Acknowledgments

This work was supported by the São Paulo Research Foundation (FAPESP) - grant number 2020/01975-9, coordinated by author DA.
