ABSTRACT

Although some specific requirements in any licensing procedures of nuclear installations aren't discussed by Brazilian Government, it is clear the basic requirements and recommendations that must be met to ensure design and acquisition control activities, to provide a good understanding of licensing procedures of those installations. Qualified Supplies, System Responsible, Licensing Requirers and others Members States might establish one federation in ODP (Open Distributed Process) for supporting licensing procedures. This work outlines concepts of RM-ODP (Reference Model of Open Distributed Process) to characterization of nature of interactions in this context to improve the confidence and the flexibility to support the regulatory decisions.
