

ICBC 2024  
ISSN: 2965-22194<sup>th</sup> International Workshop on Bioactive Compounds:

December 10th to 11th, 2024 UNICAMP

## About

ICBC started started on 2016 as a Workshop (as IWBC, International Workshop Bioactive Compounds), with a great success, attracting attendees from Brazil and other countries. In face of this, the Organizing Committee transformed the Workshop into Congress, in order to attract more people, which was firstly held on November 2018.

The topic of bioactive compounds is really transforming the modern view of Food Science and Nutrition in the World; bring attention to the food functionality related to disease prevention and health promotion. These new concepts are also calling attention from companies, which foresee opportunities for developing new products for emerging consumers.

The food scientists face new challenges in developing new products, which also should meet several exigencies from the consumers, like: ease to consume, practical, tasty, nutritious, among others. Furthermore, new technologies and new formulations are emerging to attend to this new demand, for consumers that look for products that could improve health and prevent diseases.

On the other hand, malnutrition is a big world challenge, including famine and bad nutrition habits. Food science and technology have a great opportunity in this scenario as well, for Universities, which promotes the training of cutting edge professionals; and for companies, which are responsible for the delivery of new products on the market.

Brazil and other countries should interact in order to find new solutions for innovation and experience exchange for the new food industry.

ICBC aims to bring new information for the knowledge frontiers for research, development and innovation.
